

## FLOW AND ENERGY MONITOR 3000, 3050 SERIES

### DESCRIPTION

The **Badger Meter 3000 and 3050 Series flow and energy monitors** are economical, full-featured, compact units designed for flow and BTU measurement applications. Outputs include one mechanical relay and one solid state pulse output, both featuring unit/pulse and set-point control independently based on flow or total readings.

### OPTIONAL FEATURES

An analog 4-20 mA or 0-20 mA output is optional and USB, RS-485 Modbus, and BACnet/MSTP provide high-level communication. A two-line by 16-character, 3/8" high backlit LCD display is configured by the user to display flow rate and flow total. Custom units can be created during field setup. The flow sensor input features flexible scaling options and signal type selections that permit the use of most Data Industrial meter sensors, or other frequency (sine/pulse) or linear devices. Matched 10 k $\Omega$  thermistors (ordered separately) provide temperature differential for BTU calculations.

One mechanical relay and one solid state relay output  
Optional 0/4-20 mA output  
USB, RS-485, Modbus, and BACnet/MSTP all in one unit

### FEATURES

- **Menu-driven programming or Windows based programming**
- **NEMA 4X rated enclosure**
- **Two-line x 16-character display**
- **Password-restricted access**
- **Non-volatile memory**
- **Temperature sensor zeroing**
