## PLATINUM 1000 OHM SPACE TEMPERATURE TRANSMITTER TT859 SERIES

MINCO

TT859PW

### DESCRIPTION

The Minco TT859 Platinum 1000Ω Space Temperature Transmitter is DIP switch rangeable. Non-interacting multi-turn controls provide a constant resolution adjustment. Gold-plated DIP switches ensure stable overlapping incremental selections between -10° to 60°F (-23 to 15°C) for zero and 35° to 150°F (2° to 66°C) for span. The well ventilated housing allows quick and accurate temperature sensing and effective heat dissipation from the circuit. Repeatability is excellent because the TT859 uses a platinum RTD as the sensing element. Calibrated system accuracy of the TT859 is typically 0.25°F (0.14°C) with optional sensor matching. Once installed, it can be field-calibrated or re-ranged through coarse switch adjustments and fine tune with multi-turn zero and span pots. The two-wire termination points are insensitive to power supply polarity. This prevents reversed hookups and simplifies installation.
