## TYPICAL APPLICATIONS

- Used with Low Voltage Sensors
- Multiple Sensors
- Multiple Loads
- AC Switching Only

HIGHLIGHTS

- Dual Voltage Transformer
- Self-Contained Relay
- Patented Relay Circuit Protection (Tested to over 400,000 cycles)
- Powers up to 14 sensors

## SPECIFICATIONS

- Size:( $1 / 2$ " inch chase nipple not inc. PP-20-2P: $4^{1 / 8 \times} \times 3^{\prime \prime} \times 1^{7 /} / 8^{\prime \prime}$
PP-20 \& SP-20: $3^{\prime \prime} \times 2^{1 / 4^{\prime \prime}} \times 1^{7} / 8^{\prime \prime}$
- Mounting: $1 / 2^{\prime \prime}$ inch chase nipple
- Operating Voltage: 120, 240, or 277 VAC (Single Phase only)
- Each Relay: 20 Amps
- 1 HP Motor Load
- Output Voltage: 15 VDC, 150 mA at 120 or 277 VAC
- Class II: 18 AWG, up to 2,000 ft.
- Plenum Rated
- Relative Humidity: 20 to $90 \%$ non-condensing
- Operating Temp: $14^{\circ}$ to $160^{\circ} \mathrm{F}$
- Storage Temp: $-14^{\circ}$ to $160^{\circ} \mathrm{F}$
- UL and CUL Listed
- 5 Year Warranty
- Made in U.S.A.

LOW TEMP/HI HUMIDITY(-LT)

- Conformally Coated PCB
- Operates down to $-40^{\circ} \mathrm{F}$
- Corrosion resistant from moisture

## PLENUM CONSIDERATIONS

Most local codes allow for small plastic controls in Return Air Plenums; Some Do Not! To meet local code, the Power Pack can be mounted inside an adjacent (Deep) junction box as shown below.

Power Packs are the heart of the Low Voltage Sensor System. The PP-20 transforms 120, 240 or 277 Volts (single phase) to class II 15 VDC to power the remote sensors. Utilizing Patented Relay Circuit Protection the PP-20 also switches the lighting load "On" and "Off": Tested to over 400,000 cycles at rated load! Although Plenum Rated, the elongated mounting nipple allows for the $P P-20$ to be mounted either directly thru a $1 / 2^{\prime \prime}$ inch knockout in a junction box, or to be located inside an adjacent box for specific local code requirements. Up to 14 sensors may be connected to one PP-20. Multi-circuit control can be handled by multiple $P P-20$ 's, or 2-Pole Power Packs ( $P$-20-2P) and Slave Packs ( $S P-20$ ) may be configured. PP-20's can be wired continuously hot (line side), or on the switch leg (load side) without nuisance delays upon turn "On".

## LOW VOLTAGE OPERATION AND TEST

The Low Voltage Wires or Terminal is color coded Red (15 VDC), Black (Common), and White (Occupancy Signal). With no sensors connected, using a small wire, connect the Red terminal to the White. The lights should turn "On". Remove the connection and the lights should turn "Off". With the sensors connected, the Red and Black wires provide DC power to the remote sensors, and when there is occupancy detected, the White wire produces a 15 VDC signal from the sensor to the power pack initiating the lights to "On". Upon initial power up, the Sensors automatically send an "On" signal until the sensors have stabilized and "Timed Out".

## SIZING OF THE SYSTEM - VARIOUS COMBINATIONS

Combining Power Packs provides for additional power to drive remote devices. Maximum numbers of remote sensors are shown below based on the Power Pack/Slave Pack being used. Maximum number of "Relays" is 30.

|  | Sensors | Sensors with Relav |
| :--- | ---: | ---: |
| 1 PP-20 | 14 | 8 |
| 1 PP-20-2P | 7 | 6 |
| 1 PP-20 w/SP-20 | 7 | 6 |
| P PP-20-2P w/SP-20 | 5 | 5 |
| 2 PP-20 | 28 | 16 |
| 2 PP-20-2P | 14 | 12 |

Note 1: Only three relays may be controlled with one Power Pack. If more than three circuits are required, multiple Power Packs must be used.
Note 2: Only one "Sensor with Relay" is required in most cases. See Technical Datasheet on Low Voltage Sensors with -R Interface Option.

## SYSTEMS CONSIDERATIONS

The local override switch may be upstream or downstream of a $P P-20$. However, if an $S P-20$ Auxiliary Relay or a $P P-20-2 P$ controller is being used, the switch(es) should be downstream on the load side of the relay. If power is disconnected to the Power Pack all subsequent relays will open, turning off all of the loads. If wiring the local switches before the Power Pack and Slave Pack, use multiple PP-20's, one for each circuit. This will allow for one circuit to remain powered, keeping the system operational when the other is turned off. When controlling a dimming circuit, $P P-20$ must be wired before dimmer, or SP-20 may be wired after dimmer.
INTERFACING WITH ELECTRONIC CONTROL SYSTEMS
The Relay Switching System is designed to switch Alternating Currents Only. The relay will not switch DC signal inputs to EMS or Lighting Control Systems. Use model \#MP-20, or "-R" for signal relay located in Low Voltage Sensor Heads.

## CATALOG INFORMATION

| MODEL\# | DESCRIPTION |
| :--- | :--- |
| PP-20 | Power Pack with 20 Amp Relay |
| PP-20-2P | Power Pack with two 20 Amp Relays |
| SP-20 | Slave Pack with 20 Amp Relay |

## OUTPUT VOLTAGE

15 to 24 VDC 15 to 24 VDC N/A

OUTPUT CURRENT
70 to 110 mA
35 to 70 mA
40 mA (consumption)

## TYPICAL WIRING DIAGRAMS - DO NOT WIRE HOT

NOTE: The Power Pack must be connected to a single phase Hot and Neutral System. For 120 VAC, connect the Black wire to Hot, White wire to Neutral, and Cap off the Orange wire. For 240-277 VAC, connect the Orange to Hot, White to Neutral, and Cap off the Black wire. Never connect both the Black and Orange wires! Low Voltage wire can be 18 to 22 AWG; shielding is not necessary. Class II terminal Block on PP-20-2P only accepts one conductor per terminal of 18 AWG stranded or smaller.
