MAXIMUM FLEXIBILITY FOR MONITORING

The PowerScout 48 HD is a versatile, multi-channel instrument. The modular design allows it to be configured for monitoring multiple electrical circuits or for current-only monitoring of branch circuits. It can be supplied with any of DENT's internally-shunted split-core or RōCoil CTs. Monitor any combination of up to 16 three-phase or 48 single-phase electrical devices with a single PowerScout HD. With data updates every 1 second and ANSI C12.20-2010 Class 0.2 revenue grade accuracy (depending on CT), the PowerScout 48 HD is well-suited for data center monitoring, tenant submetering, and for accountability metering in commercial, retail, and industrial facilities.

INDUSTRY-STANDARD MODBUS OR BACNET

The PowerScout 48 HD supports both Modbus (SunSpec IEEE-754) and BACnet communications protocols. Communications interface can be accomplished through standard serial RS-485 or Ethernet using either Modbus, BACnet MS/TP, Modbus TCP, or BACnet IP data formats. Additionally, the PowerScout 48 HD features two pulse outputs. A USB port is standard for easy meter configuration.

EASY INSTALLATION

Every PowerScout is line powered and designed to operate on any voltage from 90-600VAC. Unique to the PowerScout 48 HD are two independent voltage inputs. Modbus & BACnet protocols are field-selectable and any combination of split-core or flexible RōCoil CTs can be used. Configure the meter using the ViewPoint HD software utility and a direct USB connection prior to installation. Eliminate expensive trips back into the field: patented* PhaseChek™ ensures proper CT-to-phase installation the first time.
