Featuring a highly reliable variable capacitance sensor using the patented Ashcroft® SiGlas[™] sensor. This ultra-thin single crvstal diaphragm provides inherent sensor repeatability and stability.

SENSOR CROSS SECTION

The silicon dianhranm sensor has no plues or other organics to contribute to drift or mechanical degradation over time.

The patented Si-Glas[™] technology combines the high sensitivity of a variable capacitance transducer with the repeatability of a micro-machined, ultra-thin silicon diaphragm. The XLdp enables precise measurement and control of very low pressure.

The Si-Glas sensor is composed of only sputtered metals and glass molecularly bonded to silicon. There are no epoxies or other organics in the sensor to contribute to drift or mechanical degradation over time. The glass-clad silicon diaphragm withstands extreme overpressure as well as severe shock and vibration.
